## Project Design Phase-I Proposed Solution

Date	19 September 2022
Team ID	PNT2022TMID26244
Project Name	Statistical Machine Learning Approaches to
	Liver Disease Prediction
Maximum Marks	2 Marks

## **Proposed Solution Template:**

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	This project aims to identify a suitable machine learning algorithm which is capable of identifying whether a person has liver disease or not.
2.	Idea / Solution description	<ul> <li>More accurate diagnosis of liver disease by the doctors.</li> <li>The results here are predicted within seconds of entering the details. You don't need to wait for a doctor to come, unlike the traditional method.</li> </ul>
3.	Novelty / Uniqueness	<ul> <li>Recommending nearby medical professionals with liver expertise.</li> <li>Trying to educate people about both alcoholic and non-alcoholic liver cancer.</li> </ul>
4.	Social Impact / Customer Satisfaction	<ul> <li>Recommending diets.</li> <li>Describing the factors that contribute to liver disease.</li> </ul>
5.	Business Model (Revenue Model)	<ul> <li>By using ML to identify hidden or early-stage liver disease, liver-related mortality, transplants, and/or hospitalizations could all be reduced.</li> </ul>
6.	Scalability of the Solution	<ul> <li>The Project can reduce many of the limitations that occur in healthcare associated with inaccuracy in diagnoses, missing data, cost, and time.</li> </ul>
